OBJECTIVE

Third-year Mechanical Engineering student at San José State University passionate about mechanical design, manufacturing, engineering systems, and emerging technologies. Seeking opportunities to develop practical engineering skills while contributing to innovative, sustainable, and real-world solutions. Eager to gain hands-on internship experience, collaborate with engineering teams, and grow as a developing mechanical engineer.

EDUCATION

BS Mechanical Engineering, GPA: 4.0 — Expected May 2028
San José State University, San Jose, CA

TECHNICAL SKILLS

Programming: MATLAB, Python, Data Structures, Excel.
Design and Fabrication: SolidWorks CAD modeling & blueprint reading, IdeaMaker 3D printing, Soft soldering, CNC Machining.
Engineering: Mechanical design, prototyping, testing, troubleshooting, technical communication.
Languages: English, Assyrian, Farsi, Spanish.

ACADEMIC PROJECTS

TigTray Utility Steering-Wheel Tray, ME 20, SJSU — Spring 2025
- Designed and prototyped TigTray, a utility steering-wheel tray that helps reduce fast food spills in a car.
- Developed hand sketches, applied precision tolerances, created a CAD model, and 3D printed the final prototype. The project earned an "A" grade.

Solar Cell Design and Fabrication, SJSU — Fall 2024
- Built and tested a functional solar cell while applying principles of energy conversion, electrical connections, and experimental analysis. The project earned an "A" grade.
- Used soldering and technical documentation to assemble and evaluate the system.

Wind Turbine Design and Testing, SJSU — Fall 2024
- Designed and built a functional wind turbine through mechanical design, fabrication, and performance testing.
- Applied CAD modeling, material selection, problem-solving, and iterative design to improve the prototype.
- Turbine tested in the top 10 most efficient in SJSU history. The project earned an "A" grade.

Robotics Design and Programming, SJSU — Fall 2024
- Designed and assembled a functional robot using mechanical components, soldered connections, and programmed controls within RobotC. The project earned an "A" grade.
- Integrated coding and mechanical design to test movement, troubleshoot errors, and refine system performance.

RELEVANT EXPERIENCE

Design Engineer and 3D Manufacturer, Global STEM — Summer 2023
- Collaborated on the design and implementation of a sustainable water system for El Esfuerzo, Honduras.
- Used 3D manufacturing and technology-based mapping to support system planning. Projected water-distribution improvement of 30%.
- Led virtual community discussions, enhancing problem-solving and communication skills.

NextFlex FlexFactor Engineering Program — Summer 2023
- Led a team in designing a flexible hybrid-electronics tracker intended to improve dairy-production efficiency.
- Applied engineering design, problem-solving, teamwork, and entrepreneurship during a three-week intensive program.

ACTIVITIES/AWARDS

Member, MESA (Mathematics, Engineering, Science, Achievement) Club — 2024-Present
President's Scholar Award — 2025, 2026
